Abstract (en)
A push-pull switch device (10, 110) according to an aspect of the present invention includes an operation portion (50, 150), a movable portion (20, 120) that moves with the movement in a first direction of the operation portion (50, 150), a first switch (61, 161) and a second switch (62, 162) that are activated by the movement of the movable portion (20, 120), and a board (70) to one surface of which the first switch (61, 161) and the second switch (62, 162) are attached. The movable portion (20, 120) performs a first moving operation with the movement of the operation portion (50, 150) in one sense in the first direction, and performs a second moving operation different from the first moving operation with the movement of the operation portion (50, 150) in the other sense in the first direction. The first moving operation differs from the movement of the operation portion (50, 150) in one sense in the first direction. The second moving operation differs from the movement of the operation portion (50, 150) in the other sense in the first direction. The first switch (61, 161) is activated by the first moving operation of the movable portion (20, 120). The second switch (62, 162) is activated by the second moving operation of the movable portion (20, 120).
