Abstract (en)

[origin: WO2017025209A1] The invention relates to a pack (10) which can be converted into a frame, comprising: a flat rectangular carrier plate (11) which comprises a front surface (70) and a rear surface (72), a rectangular frame element (19), which has an outer wall (40) arranged on the outer periphery thereof and having a bottom and a top edge (43, 44), and a top wall (42) of the frame element (19), which top wall borders on the top edge (44) on the inside of the frame element (19), and a rectangular cover element (60). The carrier plate (11), the frame element (19) and the cover element (60) are designed and can be arranged with respect to each other such that, in the packaging state, the carrier plate (11) can be encompassed by at least the bottom edge (43) of the outer wall (40) of the frame element (19) and a cover element (50) is arranged on the top wall (42) of the frame element (19) parallel to the carrier plate (11) such that a pack is formed in the form of a parallelepiped. The carrier plate (11) and at least the cover element (60) form the top and the bottom side of the pack (10), and the outer wall (40) of the frame element (19) forms the side walls of the pack. In the frame state, the frame element (19) is arranged on the front surface (70) of the carrier plate (11) along the periphery thereof, and the cover element (60) is either arranged on the rear surface (72) of the carrier plate (11) or between the front surface (70) of the carrier plate (11) and the frame element (19).
