Abstract (en)  
[origin: WO2016091333A1] The invention relates to a high-pressure cleaning device (10), comprising a motor (16) and a pump (14) which are at least partially surrounded by a housing (12). The high-pressure cleaning device (10) has in addition a pressure hose (52) that can be connected to a pump outlet (20). In order to further develop the high-pressure cleaning device (10) in such a manner that the pressure hose (52) can be secured to the housing (12) when not in use, without this entailing a noticeable increase of the design of the housing (12), it is proposed that the high-pressure cleaning device (10) has a length-adjustable holding strap (60) which is arranged on an outer side (30) of the housing (12) and that the pressure hose (52) can be clamped in the wound-up state between the holding strap (60) and the housing (12).
