Abstract (en)
[origin: WO2016092110A1] The invention relates to a modular vehicle system comprising an electric vehicle (2) and a module (16) which can be connected to the electric vehicle (2) by means of a plug connection, wherein the electric vehicle (2) at least has an on-board power supply system (3) for supplying power to an electric drive unit (6) of the electric vehicle (2), a control device (9) for communicating with the module (16), and an interface (15), which is connected to the on-board power supply system (3) and the control device (9), for connection to the module (16), which interface (15) forms a first element of the plug connection, wherein the module (16) at least has an electrical arrangement, a module controller (23) for communicating with the control device (9) of the electric vehicle (2), and a connection element (17) which is connected to the electrical arrangement and the module controller (23) and which forms a second element of the plug connection, wherein the interface (15) of the electric vehicle (2) is connected in a detachable manner to the connection element (17) of the module (16) in order to connect the electrical arrangement of the module (16) to the on-board power supply system (3) of the electric vehicle (2), and wherein the interface (15) has a first NFC device (43) and the connection element (17) has a second NFC device (104), which NFC devices are designed for near-field communication with one another, in order to connect the control device (9) of the electric vehicle (2) to the module controller (23). The invention further relates to an electric vehicle and to a module for a modular system of this kind, and also to a method for connecting said electric vehicle and module.
