Abstract (en)

[origin: WO2016091780A1] The invention relates to a method for commissioning a lift installation (1), with a control unit (2), a bus (3), a plurality of bus nodes (41-48, 49a, 49b), which are connected to the control unit (2) by way of the bus (3), and a plurality of safety status recording means (61a-63a, 74a, 88, 89a, 89b), which are connected to the control unit (2) by way of a bus node (41-48, 49a, 49b). The method comprises the following steps: A) verification by the control unit (2) of the safety status recording means (61a-63a, 74a, 88) connected to the bus (3), B) checking by the control unit (2) of the functional capability of the safety status recording means (61a-63a, 74a, 88, 89a, 89b) connected to the bus (3), C) checking by the control unit (2) of the safety functions of the lift installation (1) on the basis of a change in status of a safety status recording means (61a-63a, 74a, 88, 89a, 89b), and D) giving the lift installation (1) clearance for normal operation only after steps A) to C) have been carried out successfully by the control unit (2), wherein the clearance for normal operation is accompanied by a change in status of the control unit (2) from an unsecured status to a secured status. A further aspect of the invention concerns an apparatus for carrying out the method and a lift installation (1) with said device.
