Abstract (en)
[origin: WO2016091712A1] The invention relates to a door system for a lift installation, the door system comprising a drive unit (30) having a driven, pivotably mounted shaft (20) and a blocking element (40), wherein the blocking element (40) is fixed to the shaft (20), at least one pivoting unit, wherein each of the at least one pivoting unit comprises a pivoting spindle (22, 24), which can be coupled with a door leaf (12, 14), and a blocking recess (42, 72), wherein the blocking recess (42, 72) is fixed to the pivoting spindle (22, 24), wherein a pivoting movement (B) of the pivoting spindle (22, 24) is limited by a first end position describing an end position of the door system, wherein the blocking element (40) interacts with the blocking recess (42, 72) in such a way that the pivoting spindle (22, 24) can be blocked in the first end position, and to a lift installation having such a door system.
