Abstract (en)
[origin: CA2961286A1] The invention relates to a sealing assembly (10) for sealing an opening (12) in a wall (14) or ceiling of a building, particularly for sealing a line feedthrough, said sealing assembly (10) being capable of covering the opening (12), having an aperture (32) for a line (18), and comprising at least two disc-like sealing segments (16) which together, at inner edge sections, define said aperture (32) and overlap at adjacent edges (22) in the circumferential direction. A sealing segment (18) for such an assembly comprises an elastic sealing compound (26) that is applied onto a carrier film (28).
