Abstract (en)
[origin: WO2016092033A1] Mount (1) for a display element, the mount (1) comprising a base part (2) with a front face (3), at least one wall element (4), at least one frame element (5) with a projecting part, and also at least one gap (7). In order to ensure that the display element is held securely in the mount (1) irrespective of the orientation of the mount, at least one restraint element (8) is provided according to the invention, said restraint element being connected to the at least one wall element (4) and/or to the at least one frame element (5) and it being possible for said at least one restraint element to move to and fro between a locked position and a released position, wherein an opening is formed between the base part (2) and the at least one restraint element (8) in the released position, and wherein the at least one restraint element (8) fills the opening at least in sections in the locked position.
