Abstract (en)
[origin: WO2016092036A1] The invention relates to a holder for a display element, comprising a base part having a face side and a rear side arranged opposite the face size, wherein there is a plurality of ribs for fastening the holder to a carrier, which ribs are arranged protruding from the rear side, and wherein there is at least one gap between the ribs for receiving at least one fastening section of the carrier. In order to enable various orientations of the holder, in particular orientations twisted toward each other, the ribs, according to the invention, are arranged one after another, viewed both in a first direction (22) and in a second direction (23), and separated from each other by the at least one gap, wherein the first direction (22) and the second direction (23) are crosswise, preferably perpendicular, to each other.
