Abstract (en)

[origin: US2017291437A1] Inkjet printer for the labeling of goods having a print head having a cylindrically shaped housing. A latching lug, and a circumferentially extending groove are formed on the housing in a rear region thereof, in the vicinity of a rear face of the housing. Further, it has an annular collar having an inner wall adapted to the housing. On the one hand, the housing is capable of being fixed and, on the other hand, it is rotatable and axially movable, relative to the annular collar. The annular collar has a bore hole axially aligned with the groove, and a fixing projection located in the bore hole. Further, it has several latching recesses for the latching lug. When the latching lug is positioned in one of the latching recesses, the bore hole is located radially above the groove.
