Abstract (en)

[origin: EP3231956A1] The telescopic gutter is made up of thin-walled segments (1a, 1b) made of a pliable material which have identical dimensions in diagonal cross-section. One of the segments (1a) is placed in the other segment (1b) on a section where they are connected as a result of which they are elastically deformed and thus form a pressure-fit connection. The gutter is installed in the roof structure beneath its covering, above the roof window. It drains away water flowing down the vapour-open roofing membrane.
