Abstract (en)

[origin: EP3231974A1] The present invention consists of a panel for the windbreak system that functions like a normal panel but comprises specific anchoring parts that enable it to open when all the other panels are closed. The door panel comprises a pane (7) between 6 and 12 mm thick, an upper profile (2a) with a cross-section such that it envelopes the pane (7) on one side and offers a hollow on the opposite side, a lower profile (2b) with a cross-section such that it envelopes the pane (7) on one side and offers a hollow on the opposite side, a lower rotating assembly (4) and a lower guide (6) fixed to the lower profile (2b) and finally, an upper rotating assembly (3) and an upper guide (5) fixed to the upper profile (2a).
