Abstract (en)

[origin: EP3232375A1] Disclosed are an apparatus and a method for inspecting side channels of a combined smartcard, capable of analyzing leaked power due to exposing a combined smartcard to electronic devices by using a contact terminal and a contactless RF circuit, and of preventing malfunction of the smartcard while reducing sensitivity to circuit noise. The apparatus for inspecting side channels of a combined smartcard, according to one embodiment, comprises: a contactless inspection unit for supplying power to the combined smartcard through induction coupling with the RF circuit of the combined smartcard, and for communicating with the combined smartcard; a contact inspection unit, which is connected to a portion of contact terminals of the combined smartcard, for measuring an electromagnetic device leakage signal of the combined smartcard generated as a result of the induction coupling; a signal analysis unit for receiving an input of the electromagnetic device leakage signal from the contact inspection unit and analyzing waveforms; and a control unit for controlling the operation of the contactless inspection unit, the contact inspection unit, and the signal analysis unit.
