Abstract (en)  
[origin: CN105433578A] A nail polish container is disclosed. The nail polish container includes a housing with a recessed portion and a nail-like component. The nail-like component is shaped and sized to substantially resemble a human nail, and the nail-like component is configured to be moveably attached to the housing, such that the nail-like component is moveable between a retracted state in which the nail-like component is substantially accommodated within the recessed portion and an extended state in which at least a portion of the nail-like component protrudes away from the recessed portion. The nail polish container can allow user to apply the nail treatment to the nail-like component and positions the treated nail-like component in close proximity to the user's actual nail to simulate the visual appearance of the user's own nail if it had been treated.
