Abstract (en)

[origin: WO2016097615A1] The invention relates to a method for monitoring the evolution of an indicator used to indicate physical state comprising the body fat of a subject and/or the muscular mass of a subject, comprising periodical steps of analysis of a biological fluid for the quantification of a biomarker representative of a metabolic activity comprising lipolysis, myolysis, lipogenesis or myogenesis, and of transmission of the result of said analysis to a remote connected apparatus.
