Abstract (en)

[origin: WO2016100643A1] The present disclosure relates to a dual skid absorbent article converter. The converter provides for a first skid and a second skid. The first skid provides a plurality of modular unit operations each capable of at least partially modifying a substrate where the plurality of modular unit operations collectively modify the substrate to form the absorbent article. The second skid provides at least one modular unit operation enabling device for cooperative association with a respective modular unit operation of the plurality of modular unit operations disposed within the first skid.
