Abstract (en)

[origin: WO2016096748A1] The invention discloses a method for processing a workpiece surface, in which a first-order surface structure (1) is formed by a first manufacturing method, for example machining. The second-order and/or third-order surface structures which are formed in the process are then changed by way of laser processing, the first-order surface structure (1) remaining substantially unchanged. In this way, it is possible to form the first-order surface structure (1) substantially independently of the third-order surface structure and/or of the second-order surface structure (2) and to thereby set the reflectance.
