Abstract (en)
[origin: WO2016097543A1] A method for producing a container (6) having a threaded wide neck (9), that involves the operations consisting of: heating a preform (1) having a polyester body (2), on which there is mounted a polyolefin sleeve (23) positioned next to an area (24) of the body (2) corresponding to the wide neck (9) of the container; introducing the heated preform (1), with the sleeve (23), into a mould (8) having the footprint of the container (6), including a threaded area (21) having the footprint of the wide neck (9); injecting a pressurised fluid into the preform (1) in order to form a blank (10) of the container (6) comprising a lower portion including the wide neck (9) with a thread (25) formed in the sleeve (23) and an upper portion (11) above the wide neck (9); separating the upper portion (11) from the lower portion that thus forms the container (6).
