Abstract (en)

[origin: WO2016097570A1] The present invention concerns coatings, for example polymer coatings or sol-gel coatings, comprising at least one layer comprising micrometric, individualised and mesostructured spherical particles, said particles having been created and loaded with at least one element selected from corrosion-inhibiting functional molecules and corrosion-inhibiting functional nano-objects, by a method comprising non-dissociable and continuous steps in a same spray-heating reactor. The purpose of said coatings is to form an anti-corrosion system, having mechanical strength and/or for colouring. The invention is applicable, in particular, in the field of protecting light aeronautical alloys against corrosion.
