Abstract (en)

[origin: WO2016095968A1] The invention relates to a laundry treatment apparatus, in particular dryer or washer dryer, comprising: an apparatus cabinet, a laundry treatment chamber for treating laundry using drying air, an air channel arranged to guide drying air from at least one outlet of the treatment chamber to at least one inlet of the treatment chamber, a heat exchanger (10) arranged within the air channel and adapted to cool the drying air and condensing humidity from the drying air, a base unit (40a) adapted to support the heat exchanger (10) and to receive at least a portion of the air channel, a condensate collector (30a) arranged in the base unit (40a) and adapted to collect the condensate formed at the heat exchanger (10), and a collector cover (42a) arranged between the bottom side of the heat exchanger (10) and the condensate collector (30a) and is at least covering a portion of the condensate collector (30a), wherein the base unit (40a) comprises supporting elements (44a-b) adapted to support the heat exchanger (10), and a clearance (62) is provided between the bottom side of the heat exchanger (10) and the top surface of the collector cover (42a).
