Abstract (en)

[origin: WO2016097566A1] The present invention relates to a valve (1) comprising a body (2) defining two fluid-intake pipes (3, 4) opening into a fluid-outlet pipe (5) forming an intersection (6) in which a throttle valve (10) is mounted, said throttle valve being connected to a motor (9) for actuating the throttle valve between a first end position in which the throttle valve (10) enables the intake of air and directs the air mainly towards the outlet pipe (5), towards the motor (9), and a second end position in which the throttle valve (10) enables the intake of air and recirculation gas and directs the fluid mainly towards the outlet pipe (5).
