Abstract (en)
[origin: WO2016096570A1] The invention relates to a screw, comprising a drive, a drilling tip for producing a bore having a bore axis and a bore diameter, said drilling tip being spaced apart from the drive in a drive-in direction, and a shaft which extends from the drive to the drilling tip, wherein the shaft has a stop which can be fed through the bore when the drive-in direction of the screw is tilted in relation to the bore axis and which has a stop surface for blocking the feeding of the stop through the bore when the drive-in direction of the screw is aligned parallel to the bore axis.
