Abstract (en)
[origin: WO2016096552A1] The present invention relates to a target-throwing machine comprising a frame (1) on which a mounting (2) is mounted. A cylinder (3) is rotatably mounted about a rotational axis (10). The cylinder (3) includes a plurality of columns (4) for storing targets in stacks. The columns (4) each have an axis parallel to the rotational axis (10). The frame (1) includes a surface (12) for receiving the targets with a view to throwing same. The mounting (2) comprises a hole (14) configured enable a target to pass from a column (4) of the cylinder (3) to the receiving surface (12). The mounting (2) comprises: - a first position for attachment relative to the frame (1); and - at least one second position for attachment relative to the frame (1). The first position and second position have an angular offset along the rotational axis (10).
