Abstract (en)  
[origin: WO2016097768A1] An electrochemical test device for determining a concentration of an analyte in a fluid sample, the electrochemical test device comprising: a support layer; a conductor layer above the support layer, the conductor layer comprising a set of electrodes; a spacer layer above the conductor layer, the spacer layer defining a sample introduction channel for introducing the fluid sample to the set of electrodes; and a cover above the spacer layer for covering the top of the sample introduction channel; wherein the electrochemical test device comprises an air passageway for venting air from the sample introduction channel, and wherein the air passageway is formed below the spacer layer.
