Abstract (en)

[origin: WO2016095910A1] The invention relates to a device for directly attaching at least a temple (3.1, 3.2), an endpiece (3.6, 3.7) and/or a bridge (3.3) of a glasses frame (3) to at least one lens (2, 2') of rimless glasses (1), in which the at least one lens (2, 2') comprises at least one edge recess (5, 5', 5'', 5'''), which extends along the transverse axis (QA) of the lens (2, 2'), in which a fastening body (6, 6', 6'', 6''') is accommodated in the edge recess (5, 5', 5'', 5''') in a form-fitting manner and is fixedly connected to the lens (2, 2'). Particularly advantageously, the fastening body (6, 6', 6'', 6'''), comprises at least one rail-like carrier element (7, 7', 7'', 7''') which extends along the transverse axis (QA) to produce a detachable plug connection and the temple (3.1, 3.2), the endpiece (3.6, 3.7) and/or the bridge (3.3) of the glasses frame (3) comprise at least one socket-like connection element (8, 8', 8'', 8'''), which has one hollow (9) adapted to the shape and size of the rail-like carrier element (7, 7', 7'', 7''').
