Abstract (en)

[origin: WO2016097177A1] The invention relates to a method for indexing at least one hemodynamic and/or biochemical parameter of a patient, comprising the steps of sensing the at least one hemodynamic and/or biochemical parameter and calculating at least one indexed hemodynamic and/or biochemical parameter on the basis of the sensed hemodynamic and/or biochemical parameter, at least one biometric parameter, and/or at least one correction parameter. The invention further relates to a data-processing device, comprising means for performing the method according to the invention. A further aspect of the invention relates to a computer program product, comprising program parts that are designed to perform a method according to the invention when loaded in a computer, and to a data carrier that comprises the computer program product according to the invention.
