Abstract (en)
[origin: US2016173503A1] Aspects described herein relate to controlling incoming data processing requests or messages and whether the incoming data processing requests are allowed to reach destination applications unmodified. The destination application may be a secure application operating within a secure application wrapper, and the secure application wrapper may determine whether and how much of the request or message is allowed to pass into a managed partition or through the secure application wrapper to reach the secure application for processing.
