Abstract (en)

[origin: WO2016096190A1] Apparatus and method for magnetizing at least one permanent magnet, wherein the apparatus comprises a first field control element and a second field control element. In this case, at least one field magnet is formed between the first and the second field control element and a receptacle for the permanent magnet is formed in the second field control element, wherein the field magnet can be moved around the permanent magnet relative to the field control elements and the permanent magnet on a circular path, so that a magnetic field of the field magnet magnetizes the permanent magnet in a magnetization position.
