Abstract (en)
[origin: US2016174158A1] A method for setting operation modes of a group of communication devices in a communication network, wherein the group of communication devices comprises a first communication device and at least a second communication device, the method comprises receiving information from at least one device of said group of communication devices, determining an operation mode based on the received information and setting an operation mode on at least one of the other communication devices of the group of communication devices to the determined operation mode, wherein information is communicated between the two devices including state information and/or instructions to set the operation mode of at least one of the other communication device of the group of communication devices to the determined operation mode.
