Abstract (en)

[origin: CN207128379U] The utility model relates to a process processing machine (100) of surface form basement (1000), have at least one processing cylinder (1), wherein, at least one processing cylinder (1) has bearing device (2) respectively in driving side and operation side, wherein, bearing device (2) of operation side have swivel bearing (3) and are used for receiving bearing case (4) of swivel bearing (3). According to according to the automatic silicon steel sheet leveling machine of the transformer, install on mobilizable lateral wall (8) bearing case (4), is equipped with at least one guide rail (5) and is used for removing lateral wall (8), and bearing case (4) can be subsided and design with promoting. From this to favorable mode realizes that will process cylinder (1) with little processing cylinder mechanical stress when closing with the locking simply just releases fast.
