Abstract (en)
[origin: EP3235759A1] There is provided a package for a tobacco product, to which a design can be added with a simple constitution without being based on ink. The package for the tobacco product is a package which houses the tobacco product inside. A surface at an outermost layer of the package includes a first region that is formed of a transparent varnish stacked on an outer surface of a base material of the package and a second region that is arranged adjacent to the first region and is formed of a base material-exposed portion where the base material of the package is exposed to an outside or a transparent varnish stacked on the outer surface of the base material. A boundary position between the first region and the second region is identifiable based only on a difference in presence or absence of a transparent varnish or a difference in property between the transparent varnishes.
