Abstract (en)
A self-service terminal (20) comprises a user interface (23). A method of operating the terminal (20) comprises receiving (51) a card (10) from a user and receiving (55) input, via the user interface (23), indicating that a user wishes to recycle the card. The method retains (59) the card (10) at the terminal (20) based on the received input. The terminal may communicate (58) with the card (10) to block the card from performing further transactions before retaining the card at the terminal (20). The terminal may store the card in a card storage receptacle within the terminal (20) which is dedicated to storing cards for recycling. The method may display (54) a menu option on the user interface (23) of the terminal for a user to recycle a card. The method may determine whether to display the menu option on the user interface (23) based on an expiry date of the card (10).
