Abstract (en)

Embodiments of the present invention disclose a user equipment paging method, including: determining, by a mobility management entity (MME) before paging user equipment in an idle state, a base station last accessed by the user equipment (S201); determining, by the MME, that the base station last accessed by the user equipment is in a non-overload state (S202); and sending, by the MME, a paging message including an identifier of the user equipment to the base station last accessed by the user equipment (S203). Correspondingly, the embodiments of the present invention further disclose an MME, which can improve user equipment paging efficiency.
