Abstract (en)
[origin: WO2016102587A1] The invention relates to a nail device (1) for setting nails into an object, comprising a housing (2), a setting mechanism for setting the nail along a setting axis, a bolt-guiding element (6) for contacting on the object at a first contact point, in particular a trigger (7) for activating the setting mechanism, a swivelable support foot (8) for contacting on the object at a second contact point, wherein a connecting line between the first and the second contact point and the setting axis span a device plane of the nail device, characterised in that the swivel axis of the support foot is oriented substantially perpendicular to the device plane.
