Abstract (en)

[origin: WO2016102187A1] The invention relates to a squeegee device for a printing press which prints a printing material (02) at at least one printing point (06, 07) in accordance with a screen printing process, comprising a screen printing screen (31; 32), a squeegee (34) which is set against the screen printing screen (31; 32) in a thrown-on position ("ON") and/or can be set against the screen printing screen (31; 32) into a thrown-on position ("ON"), a bearing device (56, 57, 58) which makes a throwing-on and throwing-off movement possible between the thrown-on position ("ON") of the squeegee (34) and a thrown-off position ("OFF"), and a drive device (39, 41, 48), by way of which the squeegee (34) can be set against the screen printing screen (31; 32) and can be set away from the latter during operation in a manner which is correlated to a press or printing material phase position, wherein the drive device (39, 41, 48) is set up to bring about and/or to make possible throwing on and throwing off of the squeegee (34) in sequences which differ from one another with different phase positions and/or phase lengths in relation to the length of the screen printing screen (31; 32).
