Abstract (en)
[origin: WO2016102000A1] A digital decorating machine has a base (10), at least one conveyor for transporting the products to be decorated along a feed direction, at least one decoration module (30), associated with the base (10) and positioned above said conveyor; the module (30) comprises a containment box-like element (32) and, inside the latter, a support (34) for printing heads (31), the support (34) is vertically movable, with respect to the box-like element (32), so as to selectively move at least the printing heads (31) between a first upper inactive position and a second lower operative position, in which said heads (31) are positioned at the correct delivery distance with respect to the surface of the products.
