Abstract (en)

[origin: GB2533655A] A package comprises a container 30 and a wrapper 20 of flexible multi-layer laminate sheet material surrounding the container. The wrapper comprises a first layer and a second layer outside the first layer. A first cut line in the first layer defines a first region of the first layer which overlies a lid 12 of the container 10. A second cut line in the second layer is offset from the first cut line. The second cut line defines a second region of the second layer. The second region overlies the lid and includes a peripheral portion 21 where the second layer extends beyond the lid 12. The peripheral portion 21 of the second layer is separable from the first layer and can be used to lift the lid 12 into the open position. The peripheral portion can be resealed against the first layer. The first and second cut lines may be lines of weakness.
