Abstract (en)

[origin: WO2016102050A1] The invention relates to a method for monitoring the safety of a crane, in particular a tower crane having a revolving platform, wherein the crane has a sensor system and a crane controller and wherein furthermore at least one tilt sensor is provided. According to the invention, the at least one tilt sensor is attached to the revolving platform of the tower crane, wherein the crane safety is monitored at least during the construction and dismantling of the tower crane.
