Abstract (en)

[origin: WO2016102558A1] It is provided a process for the preparation of a polymer from a vinyl halide monomer (monomer A) and a monomer B that contains only one ethylenic double bond by free radical polymerization in aqueous medium, wherein the monomer B is present in the polymer in an amount of up to 25 wt% of the total monomers in the polymer. The process comprising a step a) mixing water, one amphiphilic substance, from 10 to 100 wt% of the monomer B, and from 10 to 100 wt% of the monomer A at an appropriate temperature, and adding an initiator in order to start polymerization and allowing the system to react until reaching a conversion from 10 to 99 mol% of monomers; and a step b) adding the remaining amount of monomer A and the remaining amount of the monomer B; wherein once finished the polymerization reaction, the conversion of the monomers is higher than 70%, provided that monomer B is not a methacrylate monomer.
