Abstract (en)

[origin: WO2016105294A2] The invention relates to an apparatus as a substitute for the clean water channel, which is produced as a separate part from the water closet and assembled to the water closet, and which provides clean water transfer into the water closet bowl. Thanks to the invention according to the application, the difficulties experienced during the production of the ceramic channel integrated with the water closet which provides entry of clean water into the water closet of the prior art and the problems such as deformation occurring when the bidet nozzle is connected to said ceramic channel or during the production of said ceramic channel are eliminated. As a consequence, the apparatus as a substitute for the clean water channel providing clean water transfer according to the application has many advantages as the assembly thereof is easy, the deformation possibility thereof during the assembly is very low, and the separate stocking for the products with and without bidet system is eliminated.
