Abstract (en)  
[origin: WO2016102232A1] The invention relates to a motor vehicle lock assembly for a closure element (3) which is adjustably coupled to a motor vehicle body (2), wherein a motor vehicle lock (5) is provided which, in the mounted state, is arranged on the closure element (3) or on the motor vehicle body (2), wherein the motor vehicle lock (5) has a lock latch (6) and a pawl (7), wherein the lock latch (6) can be brought out of an open position into at least one closing position, in particular into a main closing position and into a pre-closing position in which the lock latch (6) is in engagement with a key collar (S) or the like for transmitting door-holding forces, wherein the pawl (7), in the blocking position thereof, holds the lock latch (6) in the closing position and can be lifted into a release position in which said pawl releases the lock latch (6) in the opening direction of the lock latch (6). It is proposed that the motor vehicle lock assembly (1), in particular the motor vehicle lock (5), has an adjustment drive (8) for exerting a driving force on the closure element (3) in the opening direction thereof such that the closure element (3) can be adjusted by means of the adjustment drive (8) in a motorized raising operation from a closing position into a gap position, and an engagement gap (9) can thereby be produced between closure element (3) and motor vehicle body (2), and that the pawl (7) can be lifted by means of the adjustment drive (8) in a motorized lifting operation.
