Abstract (en)
[origin: WO2016102910A1] A modular tubing rack assembly comprising a walkway section comprising a walkway platform, a first support tower and at least one further support tower defining a safe working area for an operator, the towers being spaced apart in a direction along a length of the platform so that a walkway is defined, and at least one tubing support section comprising a tubing support platform for receiving tubular members laid down on their sides, the tubing support section being releasably securable to the walkway section and having a length which is at least equal to a spacing between the support towers of the walkway section. The support towers being adapted to support tubular members positioned laterally of the towers on the tubing support section platform, to prevent the tubular members from encroaching into the walkway.
