Abstract (en)

[origin: CN107283369A] The invention relates to a handheld machine tool (10) which comprises a drive unit (20) used for driving an insertion tool (42) in an unimpacted operation mode, wherein an electronic torque limiting unit (70) can be used for regulating and setting a plurality of torque stages of the drive unit (20) in at least one unimpacted operation mode, the handheld machine tool comprises a communication interface (100) which is used for communicating with a user guide unit (60) operated by a user and is constructed to be used for receiving a conversion instruction (72) from the user guide unit (60), and the communication interface can be also used for regulating and setting the torque stages according to the application by means of the electronic torque limiting unit (70), wherein the user guide unit (60) is consisted of at least one mechanical operation element (62, 64) which is used for manually regulating and setting the torque stage through the communication interface (100).
