Abstract (en)
[origin: EP2924209A1] A pivot- or top hung roof window (1) with a frame (2) and a sash (3) that is pivotally movable relative to the frame (2) between a fully closed position, a nearly closed position where the sash (3) is proximate to the frame (2) and open positions. The roof window is provided with a motorized electronically operated lock (20) that has first and second cooperating lock parts (22,24) that can engage and disengage one another with the first or the second cooperating lock part (22,24). The first and second cooperating lock parts (22,24) are configured to engage one another when the sash (3) arrives from an open position at the nearly closed position. At least the first cooperating lock part (22) is configured to carry out a motorized movement that pulls the sash (3) from the nearly closed position to the fully closed position when the first and second cooperating lock parts (22,24) engage one another.
