Abstract (en)
[origin: EP3239606A1] A feeding device for pellet heating equipment, comprising: a pellet load compartment (2); a combustion chamber (4) having a brazier (5) inside which a flame is generated by the combustion of the pellet; and transfer means (6) of the pellet to move, in a controlled manner, predefined amounts of pellet along at least a feeding pipe (7) extending from the load compartment (2) to the combustion chamber (4); the transfer means (6) comprise a plurality of screws (8) each of which developing within a respective feeding pipe (7); said screws (8) being mutually coupled by means of a motion transmission element (9) for simultaneously rotating the same screws (8) and define the movement of the pellet.
