Abstract (en)
[origin: WO2016107633A1] A passive nozzle (200) for a vacuum cleaner is disclosed. The nozzle comprises an outlet part (110, 210) adapted to be coupled to a hose of the vacuum cleaner, an intermediate part (120, 220) and an inlet part (130, 230) which is hingedly connected to the intermediate part such that a tilting motion of the inlet part is allowed relative to the intermediate part within a tilt range. The nozzle further comprises a stop element (140, 240) arranged to limit the tilting motion of the inlet part, wherein the stop element comprises an elastic portion such that an end position of the tilting range is adjustable based on a force exerted on the stop element by said inlet part.
