Abstract (en)

[origin: WO2016107660A1] The invention relates to a device and a method for treating diseases of the skin, glands, mucosae, connective tissue, nerves and/or horny tissue. The device according to the invention is designed for treating diseases of the skin, glands, mucosae, connective tissue, nerves and horny tissue, and comprises at least one applicator which is arranged outside the device housing and is designed for applying an electromagnetic radiation to a diseased section of tissue, at least one radio wave module that is designed to generate an adjustable electromagnetic radiation with a variable or at least a constant frequency with an adjustable variable or at least an adjustable constant intensity, and/or an IPL module that is designed to generate an adjustable electromagnetic radiation with a variable or at least a constant wavelength or with a variable or at least a constant spectral range, with an adjustable variable or at least an adjustable constant intensity. The method according to the invention, for treating diseases of the skin, glands, mucosae, connective tissue, nerves and horny tissue, is characterised in that the diseased section of tissue is irradiated by electromagnetic radiation at least of a determined wavelength or at least of a determined spectral range over an irradiation interval or a number of irradiation intervals.
