Abstract (en)
[origin: WO2016107903A1] There is provided a container (10) for consumer articles, the container (10) being at least partially formed from a blank having a thickness (T), the blank defining a portion of the container, which comprises at least a first planar wall (20) and one or more planar walls adjacent to the first planar wall (20). Each of the one or more adjacent planar walls is connected to the first planar wall by an edge portion or by a hinge portion. The inner surface of the first planar wall (20) defines a first ablation area (A 1) and the first ablation area (A 1) comprises one or more first ablated zones having a residual thickness (RT1) that is less than the thickness (T) of the laminar blank. At least a portion of the one or more first ablated zones is spaced from each and all of the edge portions or hinge portions connecting the first planar wall (20) with the one or more adjacent planar walls.
