Abstract (en)
[origin: WO2016106433A1] Disclosed is a discharging element for discharging substances into a liquid; said discharging element has the shape of a capsule, the envelope (1-3) of which encloses a volume that can be filled with substances to be discharged; the envelope of the capsule is made of a liquid-tight material and has at least one first opening (7) and at least one second opening (8) which are arranged in such a way that when liquid flows around the capsule, the flow velocity is greater at a first opening (7) than it is at a second opening (8), the first and second openings being connected to one another via the volume that can be filled.
