Abstract (en)

[origin: CA2971022A1] The invention relates to a frame for cooling a bent glass sheet, comprising a support track for the sheet and a removable supporting part which, in the support position and during the blown-air cooling of the sheet, can rest on the upper face of the sheet and along the periphery thereof. The bent sheet being cooled on the cooling frame remains in contact with the frame according to the invention during cooling and its shape more closely matches the desired shape.
